

MotorFuel License Center

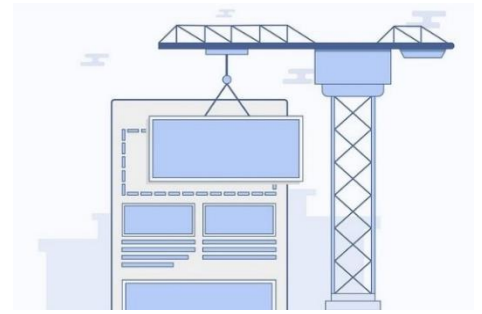

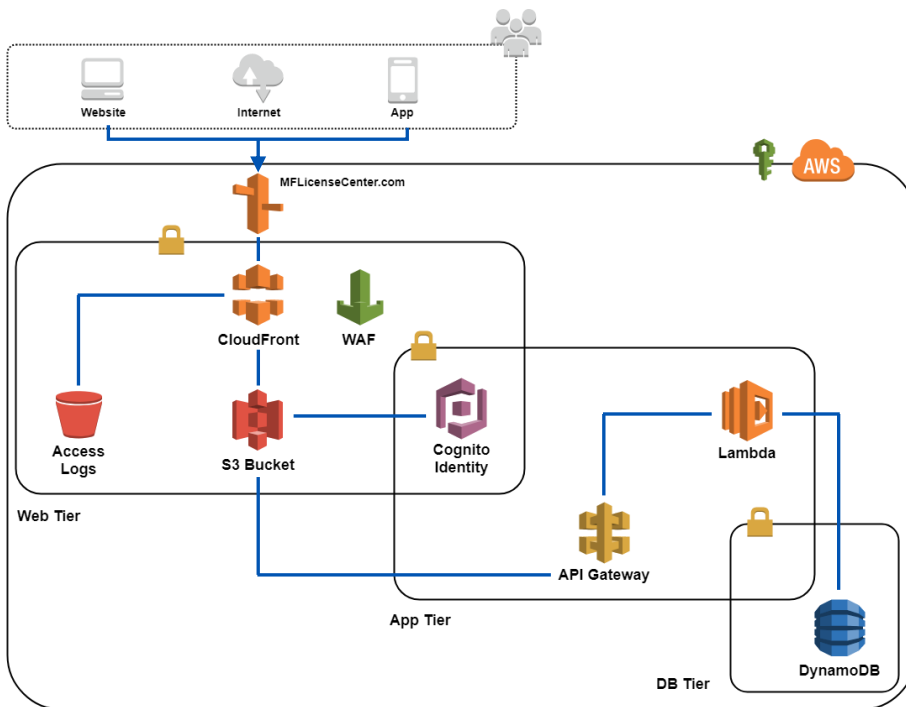

Oil & gas enterprise software platform enhances SaaS best practices in industry by delivering resource isolation to increase security and cloud-native performance for users.

Technical Specifications

Dynamic, enterprise-ready CI/CD (Continuous Integration and Continuous Delivery) serverless application and web services deployed via Amazon Web Services (AWS) for centralized access to motor fuel tax license resources.

AWS Cloud Architecture

Scalable, Secure, & Resilient – Principles for microservice design engineered to provide High Availability (HA), agile development, flexible implementation, & easy deployment. Distributed cloud architecture offers extensible integration by Software Development Kits (SDKs) and interoperable access through Application Programming Interfaces (APIs).

Advantages:

Security

- Isolated resources
- Encryption of data at rest
- Private enterprise deployments

Performance

- Asynchronous execution
- Localization for low latency
- Dynamic resource provisioning

Reliability

- Regional data centers
- Enterprise level support
- Content Delivery Network (CDN)

Efficiency

- Real time access to updates
- Works with existing processes
- Synchronize branch office access

Flexibility

- Back-office integration
- Customizable user interface

The Master Data Source for Automated Fuel Tax Compliance.
